Add R18inq Database to UI

1. While logged in to r18production in UI, choose Options ... Add/Remove Databases

2. Within the Add/Removed Databases dialog box, select r18inq from the list of Available Databases on the right. Click the < button to move it into the Installed Databases list on the left.

3. Click OK to finalize.

4. Open UI again, and choose r18inq from the drop-down box to log in to r18inq. You will need to refresh scripts when you first log in and periodically when updates are loaded.

5. When you see this (with the proper database name), you are finished:

User name and password are the same for all Colleague and Benefactor databases.
